Algebra department, data security group. Extra courses on cryptography and data security and advanced English were studied along with the common curriculum. Diploma paper is about analysis of abelian groups with respect to their cryptological applications.

Professional knowledge and skills

Technologies
- HTML/Jade
- CSS/SASS
- JavaScript
- git
- C/C++
- SQL/T-SQL
- Wolfram

Languages
- Russian (native)
- English (advanced)

About me

I started to learn web and programming by myself. After successful participation in mathematics and physics olympiads I made it to the MSU. Extra courses on cryptography were passed there. At the end of the third year I started working at INNOVA as a project development manager. During this period at the company I began to analize users data (game events, searching for and returning players who had left). I always read IT news and books. In my opinion, the best education is practice and sharing experience with professionals, that's why I'm looking forward to work with a great team that is open to discussions and creative solutions. In the future I plan to learn more about design, data analysis and software engineering.
